No. of Holding Days Protection Level Minimum Investment Amt.

Participation Rate 6.50% **Interest Rate** 5,000,000 Strike Level

Trigger Level* 110%

* Trigger Level use to determine the return on structured notes, and it is not related to early redemption. The observation for the Trigger Event starts on the first business day following the trade date. (Trade Date + 1)

How to calculate returns	This document is a sample calculation
Par value	10,000,000
Strike Price	800 Points (Assume the spot price at the investment date is 800 points
Trigger Price	880 Points (110% of Spot Price)
Tenor	182 Days
Participation Rate**	6.50% per installment
Interest Rate***	2.75% per year
Participation Rate	*Interest Rate
= {Par value x [Participation Rate x	= [Par value x (Interest Rate x Tenor / 365)]
(Closing price of the underlying - Strike Price)/	
Strike Price]}	= [10,000,000 x (2.75% x 182 / 365)]
= {10,000,000 x [6.50% x (879 - 800) / 800]}	= 137,123.29 Baht
= 64,187.50 Baht	
Assume that the closing price on the valuation date = 879 or $+9\%$	

Case A

The closing price of the underlying is less than the Trigger Event. On the determination date, the index value is

Disclaimer: Investors in structured notes must qualify as high-net-worth investors, ultra high net worth investors, or institutional investors. Structured notes are high-risk and complex instruments. The return on investment is uncertain and depends on the price of the underlying factors. Investors may not get back the amount they invested. Structured notes do not have a secondary market for trading and have transfer restrictions as specified in the terms and conditions. Please thoroughly understand the specific characteristics of the product, the return conditions, the risks involved and seek additional advice before making an investment decision.
